2027 - Calendar -- based on a pentahexaflexagon -- Ralph Jones -- Diagrams by Origami Resource Center

Assembly: Align the two pieces back-to-back with three Wednesdays behind three Wednesdays and glue them together.
When the glue has dried, pre-crease all the triangles. Fold together: 1) September Mon with Sat/Sun. 2) November Sat/Sun with Friday. 3) November Wednesday with Thursday. 4) November Monday with Tuesday. 5) July Wednesday with Thursday. 6) July Mon with Tues. 7) May Thursday and Wednesday. 8) May Monday and Tuesday. Rearrange flaps so May Sat/Sun is behind and December Friday. (center months should all be January or all be February) Glue the two remaining blank triangles together.

Flexing: Now January and February calendars are viewable. With February at the center, on the top, one of the pinch flexes will make March and April viewable. Various flexes will make all twelve months viewable.
