

## 2021 - Calendar -- based on a pentahexaflexagon -- Ralph Jones -- Diagrams by Origami Resource Center

Assembly: Align the two pieces back-to-back with three Wednesdays behind three Wednesdays and glue them together. When the glue has dried, pre-crease all the triangles. Fold together the November Sat/Sun with Friday; fold together the November Wednesday with Thursday; and fold together the November Monday with Tuesday. Continue folding together the July Wednesday with Thursday; fold together the July Monday with Tuesday; and fold together the July Sat/Sun forward on top of the May Friday. Glue the two remaining blank triangles together.

Flexing: Now January and February calendars are viewable. With February at the center, on the top, one of the pinch flexes will make March and April viewable. Various flexes will make all twelve months viewable.
